

Problem Analysis

Many students and beginner job seekers struggle to create professional CVs because they do not have enough experience with resume writing and job applications. They often do not know how to structure information correctly, describe their skills, or present their experience in a professional way.

As a result, many CVs contain grammar mistakes, weak formatting, missing information, or unclear descriptions of skills and experience. This can reduce the chances of getting invited to a job interview or internship.

Current online resume tools mostly focus on templates and formatting, but they do not provide detailed personalised feedback about the content quality of the CV. Because of this, users may still submit weak resumes without understanding their mistakes.

CryorApply aims to help users better understand the strengths and weaknesses of their CVs before applying for jobs or internships.
