

AI CV REVIEWER AND CAREER ASSISTANT

ALEXANDR AN, KONSTANTIN SHEVTSOV, MIKHAIL MAKARCHUK, MAKSIM PINCHUK

PROBLEM AND IDEA

Students and beginner job seekers often do not know how to create a strong CV.

Common issues:

- weak structure
- unclear skills
- poor formatting
- missing job keywords
- weak project descriptions

Idea: CryorApply helps users improve their CV with AI feedback before applying for jobs or internships.

SOLUTION AND MAIN FEATURES

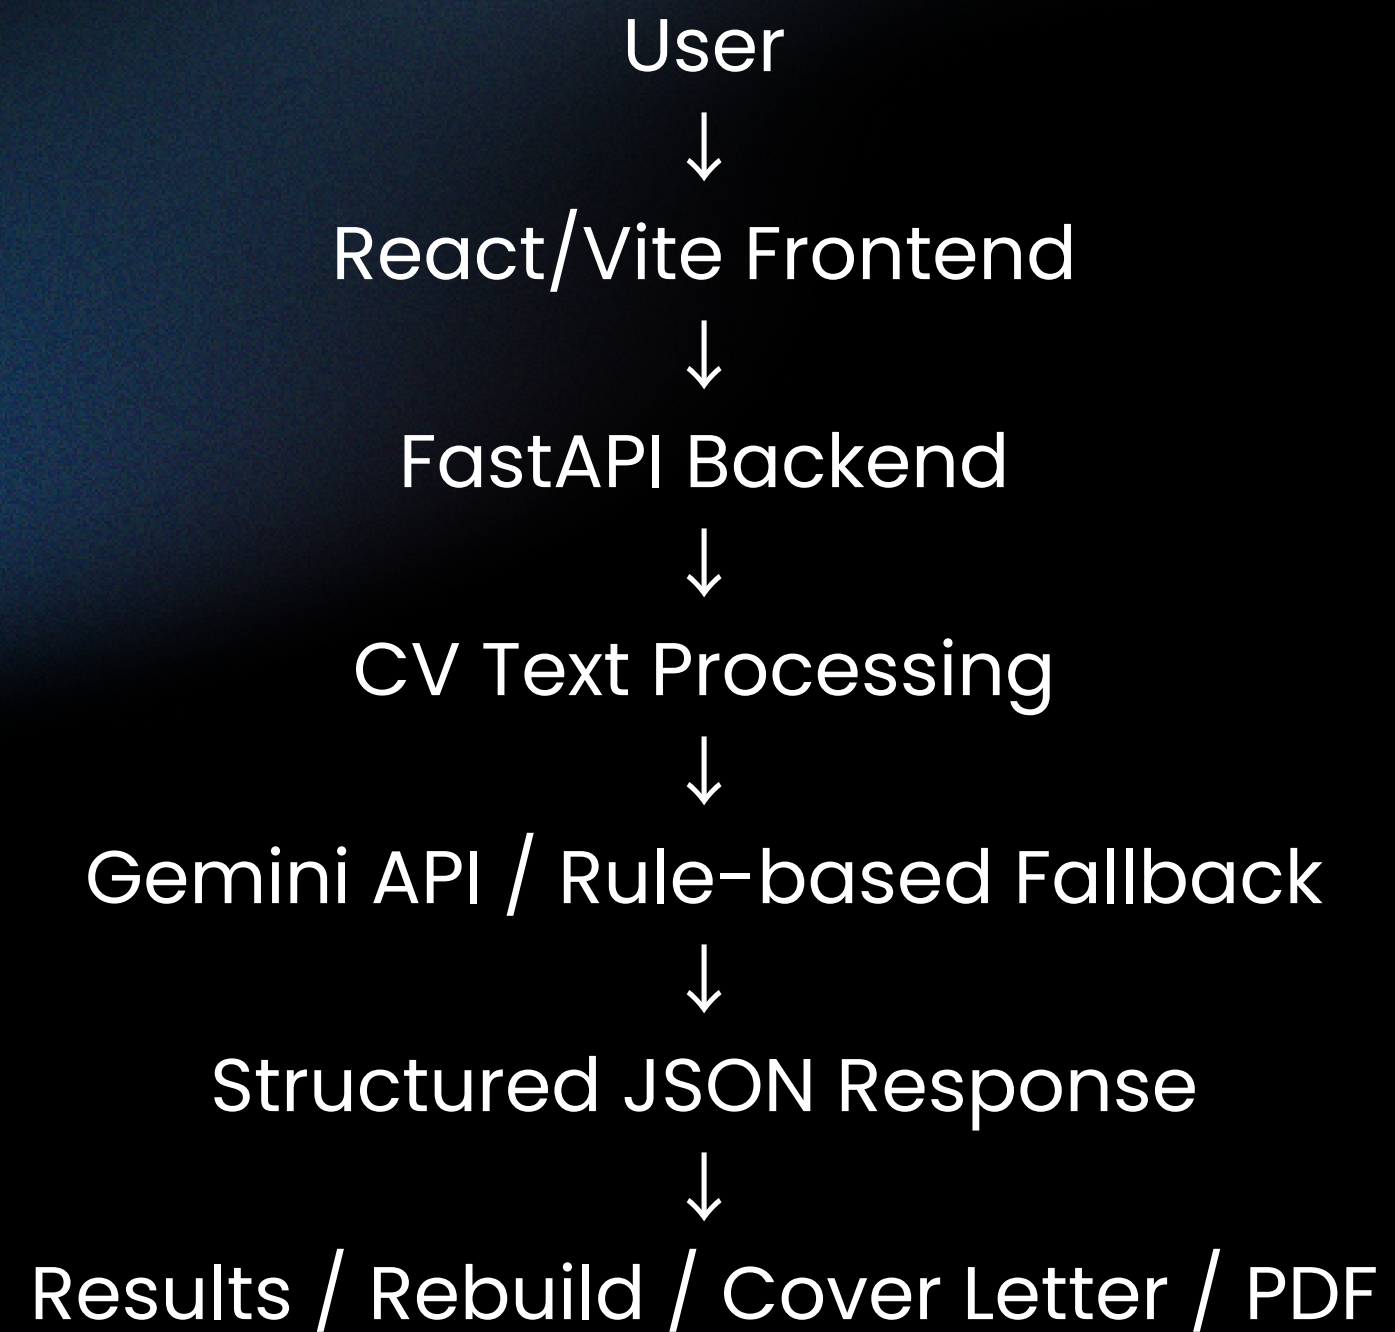

CryorApply allows users to upload or paste a CV, add a job description, receive AI feedback, improve the CV, rebuild it, generate a cover letter, and download PDF outputs.

Main features:

- CV Review
- Job Matching
- Rewrite Suggestions
- Re-score
- CV Rebuild
- Cover Letter
- PDF Export

The screenshot displays the CryorApply AI CV review interface. On the left, a dark sidebar contains the CryorApply logo and a three-step progress indicator: 1. Your CV (Upload or paste), 2. Target role (Optional match), and 3. Review (Score and fixes). Below the sidebar, text states: 'Built for students and first job seekers. Get a structured score and concrete fixes before you apply.' The main content area is titled 'STEP 1 Add your CV' and includes instructions: 'Drop a PDF or DOCX file, or paste the text directly. Nothing is stored after the review.' It features three buttons: 'Review CV', 'Cover Letter', and '+ Build from scratch'. A large dashed box with a cloud upload icon prompts users to 'Drop CV here or browse' (PDF or DOCX, up to 10 MB). Below this, a section titled 'Or paste CV text' contains a text area with the placeholder 'Paste your CV text here if you prefer not to upload a file.' and a 'Continue →' button at the bottom right.

HOW IT WORKS

TECHNOLOGY STACK

Frontend: React, Vite, CSS, Framer Motion

Backend: Python, FastAPI, Pydantic

File processing: pypdf, python-docx

AI: Google Gemini API

PDF: jsPDF

Deployment: Vercel + GitHub

AI FEATURES

Gemini API is used for:

- CV scoring and feedback
- job matching
- missing keyword detection
- rewrite suggestions
- follow-up questions
- CV rebuild
- cover letter generation

We do not train our own model. We use a pre-trained model through API with prompts and structured JSON.

DEMO FLOW

Live demo:

- 1.Upload or paste CV
- 2.Add job description
- 3.Run review
- 4.Show score and feedback
- 5.Apply rewrite and re-score
- 6.Rebuild CV
- 7.Download PDF
- 8.Generate cover letter

LIMITATIONS AND FUTURE WORK

Current limitations

- scanned PDFs need OCR
- no user accounts yet
- no saved review history yet

Future improvements

- Supabase Auth
- saved CV history
- OCR support
- LinkedIn/GitHub checker
- interview question generator

Conclusion

CryorApply helps beginners create stronger job applications faster.

THANK YOU
